

CONTAINER GARDENING

Summer smart gardening that beats the heat. Colorful. Edible. Resilient.

Why containers?

- Great for patios, decks, and small spaces.
- Flexibility to move with sun, shade, or weather.
- Easier to monitor watering, pests, and harvests.

Heat-tolerant plant picks.

Ornamentals:

Lantana – long blooms, pollinator-friendly

Calibrachoa – vibrant and low-maintenance

Angelonia – heat-loving spikes of color

Sedum – tough, sculptural, drought-tolerant

Purple Fountain Grass – adds movement and texture

Edibles:

Cherry Tomatoes – compact and sun-loving

Peppers – thrive in heat with full sun

Herbs – rosemary, thyme, basil – aromatic and adaptable

Soil mix and water-saving additions.

Espoma® Potting Mix and Espoma® Land & Sea Compost is a great summer blend.

- Use high-quality potting mix—never garden soil.
- Add water-holding crystals or biochar to boost moisture retention.
- Mix in compost for nutrients and structure.

Placement and heat strategies.

- Morning sun and afternoon shade is ideal during extreme heat.
- Group containers to create microclimates and reduce evaporation.
- Use plant caddies or wheeled bases to rotate or move pots as needed.
- Protect roots with a double-walled planter or double-potting (nest a grower pot inside a larger decorative one for insulation).

Keeping plants hydrated.

Tip: check daily—containers dry out fast in full sun.

- Water deeply in the early morning.
- Use *self-watering containers* or add a water reservoir.
- Mulch the surface with straw, bark, or even decorative moss.

Homestead summer favorites:

- Self-Watering Pots; perfect for travel and heat.
- Water-Holding Crystals; reduce watering frequency.
- Espoma® Organic Potting Mix; moisture-retentive and peat-free.
- Espoma® Tomato-tone®, Flower-tone®, Garden-tone®; tailored summer fertilizers.
- Compact Edibles & Pollinator Picks; curated for summer success.

Grow smart. Grow beautiful.
