

EDIBLE FRUIT GUIDE 2026

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
APPLE 'BRAEBURN'	Firm, crisp apple with balanced sweet-tart flavor and aromatic complexity. Red-orange striped over yellow background.	Late season (mid to late October)	Fresh eating, baking, cider, storage. Excellent keeper	Requires a different mid- to late-blooming apple variety for cross-pollination (Fuji, Gala, Honeycrisp, or Golden Delicious work well)	281003	15 gal.
APPLE 'CRIMSON CRISP'	Deep red apple with exceptionally crisp texture and sweet flavor with mild tartness. Naturally disease resistant.	Mid-season (late Sept.)	Fresh eating, salads, good storage	Requires a mid-season pollinator (Gala, Honeycrisp, Golden Delicious)	281149	7 gal.
APPLE 'EMPIRE'	McIntosh-type apple with firm texture, juicy flesh, and sweet-tart flavor. Bright red skin.	Mid-season (late Sept. to early October)	Fresh eating, salads, sauce	Requires another mid-season bloomer (McIntosh, Gala, Honeycrisp, Golden Delicious)	281255	7 gal. Semi-Dwarf
APPLE 'FUJI'	Very sweet, super crisp apple with excellent storage life. Red-blushed skin over yellow-green background.	Late season (mid to late October)	Fresh eating, storage, salads	Requires a mid- to late-season pollinator (Gala, Honeycrisp, Golden Delicious, Braeburn)	281183	1.5" Espalier
APPLE 'GINGER GOLD'	Early yellow apple with mild sweetness and light tartness. Smooth skin, firm texture.	Early season (mid to late August)	Fresh eating, sauce, early pies	Requires another early- to mid-blooming variety (Gala, Honeycrisp, Golden Delicious)	281105	7 gal. Semi-Dwarf
APPLE 'GOLDEN DELICIOUS'	Sweet, mellow apple with tender crisp texture. Yellow skin when ripe. Reliable producer.	Mid-season (late Sept.)	Fresh eating, baking, sauce, cider	Partially self-fertile, but produces heavier crops with another mid-season pollinator. Excellent pollinator for many varieties.	281110	7 gal. Semi-Dwarf
APPLE 'HONEYCRISP'	Exceptionally crisp and juicy with explosive sweet-tart flavor. Red mottled skin.	Mid-season (mid to late Sept.)	Fresh eating, salads, limited baking.	Requires a mid-season pollinator (Gala, Empire, Golden Delicious, Fuji)	281133 281164 281144	7 gal. Semi-Dwarf 15 gal. Semi-Dwarf 20 gal. Espalier
APPLE 'JONATHAN'	Classic heirloom apple with bright red skin and bold sweet-tart flavor.	Mid-season (late Sept.)	Fresh eating, pies, cider	Requires another mid-season bloomer (Golden Delicious, Gala, McIntosh)	281181	15 gal. Semi-Dwarf
APPLE 'MCINTOSH'	Juicy, tender apple with bright sweet-tart flavor. Deep red skin.	Early to mid-season (early to mid-Sept.)	Fresh eating, applesauce, cider	Requires a mid-season pollinator (Empire, Gala, Golden Delicious, Jonathan)	281116	7 gal. Semi-Dwarf
APPLE 'PINK LADY'	Very crisp apple with vibrant sweet-tart flavor. Pink blush over green background.	Very late season (late Oct. to early Nov.)	Fresh eating, storage, salads.	Requires a late-season pollinator (Fuji, Braeburn, Gala, Golden Delicious)	281231	7 gal. Semi-Dwarf
APPLE 'ROYAL GALA'	Mildly sweet, crisp apple with red striping over yellow background.	Early to mid-season (early Sept.)	Fresh eating, salads, light baking.	Requires another mid-season bloomer (Honeycrisp, Fuji, Golden Delicious, Empire).	281160	7 gal. Semi-Dwarf
APPLE 'STAYMAN'	Firm apple with bold tart flavor and wine-like richness. Often called Stayman Winesap.	Late season (October)	Baking, cider, fresh eating for tart lovers	Requires a mid- to late-season pollinator (Golden Delicious, Fuji, Gala)	281222	7 gal. Semi-Dwarf
APPLE 'WINESAP'	Heirloom apple with deep red skin and spicy, tart flavor.	Late season (October)	Cider, baking, fresh eating, excellent storage.	Requires a mid- to late-season pollinator (Golden Delicious, Stayman, Fuji)	281140	15 gal. Semi-Dwarf

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
BLACKBERRY 'BABY CAKES'	Compact, thornless dwarf blackberry perfect for containers and small gardens. Produces full-sized, sweet berries on a tidy, upright plant that stays around 3-4 feet tall. Great ornamental appeal with white spring flowers.	Mid-season (July). May produce light repeat fruiting in late summer.	Fresh eating, desserts, patio gardening, small-space edible landscapes.	Self-pollinating. Does not require another variety for fruit set, though multiple plants can increase yield.	284184 284312	2 gal. 3 gal.
BLACKBERRY 'CHESTER'	Vigorous, thornless trailing variety known for heavy yields of large, firm, sweet berries. Excellent heat tolerance and reliable production.	Late season (late July through August).	Fresh eating, baking, preserves, freezing. Excellent for extended harvest.	Self-pollinating. Produces well on its own but benefits from having other blackberries nearby.	284018	2 gal.
BLACKBERRY 'PRIME-ARK® FREEDOM'	Thornless primocane variety that produces very large, sweet berries. Can fruit on first-year canes (primocanes) and second-year canes (floricanes), allowing for extended harvest.	Early summer crop (June) on second-year canes; late summer to early fall crop (August–September) on first-year canes.	Fresh eating, extended harvest gardens, home growers wanting two crops per season.	Self-pollinating. No additional variety required.	284187	2 gal.
BLACKBERRY 'TASTE OF HEAVEN'	Thornless, compact variety producing medium to large berries with exceptional sweetness and flavor. Upright growth habit makes it easy to manage.	Mid-season (July).	Fresh eating, desserts, preserves, backyard growing.	Self-pollinating. Produces reliably without another variety.	284126	3 gal.
BLACKBERRY 'TRIPLE CROWN'	Popular thornless semi-erect variety known for large, glossy berries with outstanding sweet flavor and high yields. Vigorous and productive.	Mid- to late season (mid-July through August).	Fresh eating, baking, jams, freezing. Excellent home garden performer.	Self-pollinating. Does not require a pollinator partner, though planting multiples increases overall yield.	284028	2 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
BLUEBERRY 'BERRYBUX'	Compact, boxwood-style blueberry with small leaves and tight growth habit. Edible landscaping favorite.	Mid-season (July)	Fresh snacking, cereal topping, small-batch jams, garnishes.	Self-pollinating; heavier yields with another mid-season variety nearby.	284006	2 gal.
BLUEBERRY 'BLESS YOUR HEART' (Southern Highbush)	Heat-tolerant variety with sweet berries and glossy foliage.	Early to mid-season (June)	Fresh eating, early-season baking, smoothies.	Self-pollinating; benefits from another Southern highbush variety.	284271	3 gal.
BLUEBERRY 'BLUE CROP'	Reliable, heavy-producing classic with large, sweet berries.	Mid-season (July)	Fresh eating, freezing, muffins, pies, jams.	Self-pollinating; improved yield with Duke or Blue Ray.	284007 284062	2 gal. 5 gal.
BLUEBERRY 'BLUE RAY'	Large, firm berries with sweet flavor and strong upright growth. Excellent fall color.	Mid-season (July)	Fresh eating, baking, pancakes, preserves.	Self-pollinating; pairs well with Bluecrop.	284561	2 gal.
BLUEBERRY 'CABERNET SPLASH'	Ornamental blueberry with striking red-variegated foliage and small edible berries.	Mid-season (July)	Fresh eating, salads, light snacking.	Self-pollinating; larger crops with another variety nearby.	284206	2 gal.
BLUEBERRY 'CHANDLER'	Produces exceptionally large berries—among the biggest available. Long harvest period.	Mid- to late season (July–August)	Fresh eating (large dessert berries), fruit platters, baking.	Self-pollinating; benefits from mid- to late-season partner.	284219	5 gal.
BLUEBERRY 'CHIPPEWA' (Half-High)	Compact, cold-hardy plant with sweet, medium-sized berries.	Early to mid-season (late June–July)	Fresh eating, muffins, pancakes, freezing	Self-pollinating; improved yield with another half-high variety.	284205	2 gal.
BLUEBERRY 'CLIMAX' (Rabbiteye)	Vigorous Southern rabbiteye variety with sweet, light-blue berries.	Early season (June)	Fresh eating, cobbles, jams, Southern-style desserts.	Requires another rabbiteye variety (Premier, Tifblue, Powder Blue).	284405	3 gal.
BLUEBERRY 'DUKE'	Early ripening variety with firm, mildly sweet berries and dependable crops.	Early season (June)	Fresh eating, freezing, early pies and crisps.	Self-pollinating; excellent pollinator for other early varieties.	284001 284105	2 gal. 5 gal.
BLUEBERRY 'ELLIOTT'	Late-season variety extending harvest with firm, flavorful berries.	Late season (August)	Late-season fresh eating, freezing, extended baking season.	Self-pollinating; benefits from another late bloomer.	284165	2 gal.
BLUEBERRY 'FOR HEAVEN'S SAKE'	Compact, heavy-yielding variety with sweet berries.	Mid-season (July)	Fresh snacking, desserts, small-batch preserves.	Self-pollinating; heavier yields with companion planting.	284272	3 gal.
BLUEBERRY 'JELLY BEAN'	Dwarf ornamental blueberry with sweet berries and brilliant red fall foliage.	Mid-season (July)	Fresh eating, cereal topping, small desserts.	Self-pollinating; increased yield with another mid-season type.	284159	2 gal.
BLUEBERRY 'JERSEY BLUE'	Classic late-season heirloom with small, sweet berries and vigorous growth.	Late season (August)	Baking, muffins, pancakes, jam-making.	Self-pollinating; pairs well with Elliott.	284109	2 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
BLUEBERRY 'NORTHLAND'	Hardy, compact plant with abundant small-to-medium sweet berries.	Mid-season (July)	Fresh eating, baking, freezing.	Self-pollinating; improved yield with another mid-season variety.	284064 284408	2 gal. 5 gal.
BLUEBERRY 'PATRIOT'	Early producer with large berries and excellent adaptability to varied soils.	Early season (June)	Fresh eating, pies, freezing.	Self-pollinating; pairs well with Duke.	284113	3 gal.
BLUEBERRY 'PEACH SORBET'	Ornamental blueberry with peach-toned foliage and compact growth.	Early to mid-season (June–July)	Fresh snacking, fruit salads, light desserts.	Self-pollinating; better yields with companion planting.	284152 284314	2 gal. 3 gal.
BLUEBERRY 'PERPETUA'	Unique everbearing variety producing spring and late summer crops.	June and again August–Sept.	Fresh eating across seasons, snacking, freezing second crop.	Self-pollinating; benefits from another mid-season variety.	284167	2 gal.
BLUEBERRY 'PINK ICING'	Compact ornamental blueberry with pink-tinged foliage and sweet berries.	Mid-season (July)	Fresh eating, fruit salads, decorative desserts.	Self-pollinating; increased production with another variety.	284002 284193	2 gal. 3 gal.
BLUEBERRY 'PINK LEMONADE' (Rabbiteye)	Unique pink berries with sweet, mild flavor. Vigorous growth.	Mid- to late season (July–August)	Fresh eating, fruit salads, specialty desserts, colorful preserves.	Requires another rabbiteye variety (Tifblue, Premier, Powder Blue).	284136	2 gal.
BLUEBERRY 'POWDER BLUE' (Rabbiteye)	Late-season rabbiteye with light-blue berries and excellent heat tolerance.	Late season (August)	Fresh eating, cobblers, freezing.	Requires another rabbiteye (Premier, Climax, Tifblue).	284181	7 gal.
BLUEBERRY 'PREMIER' (Rabbiteye)	Early rabbiteye with large, sweet berries and vigorous growth.	Early to mid-season (June–July)	Fresh eating, baking, freezing.	Requires another rabbiteye (Climax, Tifblue, Powder Blue).	284100	3 gal.
BLUEBERRY 'SILVER DOLLAR'	Compact ornamental blueberry with silvery-blue foliage tones.	Mid-season (July)	Fresh eating, small desserts, snacking.	Self-pollinating; improved yield with another variety.	284120 284315	2 gal. 3 gal.
"BLUEBERRY 'SPLENDID' (Rabbiteye)"	Compact rabbiteye with sweet berries and good heat tolerance.	Mid-season (July)	Fresh eating, jams, baking.	Requires another rabbiteye variety.	284137	3 gal.
BLUEBERRY 'SWEETHEART'	Heavy-yielding variety with sweet berries and potential second crop.	Early summer and light fall crop.	Fresh eating, extended-season desserts, freezing.	Self-pollinating; increased yields with another highbush variety.	284169	3 gal.
BLUEBERRY 'TAKES THE CAKE'	Compact blueberry with very sweet, dessert-quality berries.	Mid-season (July)	Fresh eating (very sweet), desserts, muffins.	Self-pollinating; benefits from companion planting.	284406	3 gal.
BLUEBERRY 'TIFBLUE' (Rabbiteye)	Vigorous, late-season rabbiteye known for reliable production.	Southern climates.	Fresh eating, cobblers, preserves.	Requires another rabbiteye variety (Climax, Premier, Powder Blue).	284035 284182	3 gal. 7 gal.
BLUEBERRY 'TOPHAT'	True dwarf blueberry ideal for containers; small but flavorful berries.	Mid-season (July)	Fresh snacking, cereal topping, small-batch baking.	Self-pollinating; improved production with another small highbush type.	284104	2 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
CHERRY 'BING' (Blackyork)	Large, heart-shaped dark red cherry with firm flesh and classic sweet flavor. One of the most popular sweet cherries.	Mid-season (mid to late June)	Fresh eating, fruit platters, chocolate-dipped cherries, fresh desserts.	Requires cross-pollination with another compatible sweet cherry (Black Tartarian, Blackgold, Lapins, or Regina).	281053 281061	15 gal. Semi-Dwarf 7 gal. Semi-Dwarf
CHERRY 'BLACK PEARL'	Very large, dark red to nearly black sweet cherry with firm texture and rich flavor. Early ripening.	Early to mid-season (early to mid-June)	Fresh eating, fresh desserts, fruit trays, snacking.	Requires another sweet cherry variety for cross-pollination (Blackgold, Lapins, Regina).	281125	7 gal. Semi-Dwarf
CHERRY 'BLACK TARTARIAN'	Heirloom sweet cherry with deep purple-black skin and juicy, tender flesh.	Early season (early to mid-June)	Fresh eating, light baking, preserves.	Requires cross-pollination with another sweet cherry (Bing, Blackgold, Lapins).	281251	15 gal.
CHERRY 'BLACKGOLD'	Dark red sweet cherry known for late bloom and improved frost resistance. Firm and flavorful.	Mid- to late season (late June)	Fresh eating, baking, freezing.	Self-fertile but produces heavier crops with another sweet cherry nearby.	281156	7 gal. Semi-Dwarf
CHERRY 'LAPINS'	Large, dark red sweet cherry with firm texture and excellent flavor. Heavy producer.	Mid- to late season (late June to early July)	Fresh eating, baking, freezing, preserves.	Self-fertile. Does not require another variety but benefits from cross-pollination.	281250	15 gal. Semi-Dwarf
CHERRY 'MONTMORENCY' (TART CHERRY)	Bright red tart cherry with firm flesh and classic sour flavor. Standard pie cherry.	Mid-season (late June)	Pies, cobblers, jams, preserves, juice, drying.	Self-fertile. Does not require another variety.	281252 281210	15 gal. Semi-Dwarf 7 gal. Semi-Dwarf
CHERRY 'REGINA'	Late-season sweet cherry with very firm, dark red fruit and rich flavor. Excellent cracking resistance.	Late season (early July)	Fresh eating, fruit platters, baking, freezing.	Requires cross-pollination with another sweet cherry (Blackgold, Lapins, Bing).	281152	7 gal. Semi-Dwarf

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
CHESTNUT 'DUNSTAN'	Large, sweet chestnuts produced on vigorous, blight-resistant trees. 'Dunstan' is a cross between American and Chinese chestnut, combining improved disease resistance with excellent nut quality. Trees are fast-growing and begin bearing at a relatively young age.	Late season (late September to October in the Mid-Atlantic). Nuts drop naturally when ripe.	Roasting (classic "roasting chestnuts"), baking, stuffing, soups, chestnut purée, candying, grinding into chestnut flour, savory dishes.	Requires cross-pollination with another chestnut tree (a different seedling or variety) for reliable nut production. Plant at least two trees within 50–100 feet of each other.	281191	7 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
CHINQUAPIN ALLEGHENY	Native North American shrub chestnut (<i>Castanea pumila</i> var. <i>pumila</i>) producing small, sweet nuts enclosed in spiny burrs. Plants are shrubby to small tree-form and are well adapted to the Mid-Atlantic. Nuts are smaller than traditional chestnuts but rich, sweet, and flavorful.	Late season (September to October in the Mid-Atlantic). Burrs split open when nuts are ripe.	Fresh eating (sweet and mild), roasting, baking, grinding into flour, adding to stuffing or savory dishes.	Requires cross-pollination from another genetically different chinquapin or chestnut for reliable nut production. Plant at least two within 50-100 feet for best yields.	281056	7 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
FIG 'BLACK ITALIAN'	Large, dark purple to nearly black figs with strawberry-red flesh and rich, sweet flavor. Productive and vigorous.	Main crop: August–Sept. (may produce a light early “breba” crop in early summer on old wood)	Fresh eating, charcuterie boards, baking, fig jam, drying.	Self-fertile. Does not require another fig tree for fruit production.	284201	3 gal.
FIG 'BROWN TURKEY'	Reliable and adaptable variety with medium-sized brownish-purple fruit and pink flesh. Mild, sweet flavor.	Light breba crop in early summer; main crop August–Sept.	Fresh eating, preserves, baking, drying.	Self-fertile.	284060 284185 284179	3 gal. 5 gal. 5 gal. patio tree
FIG 'CELESTE'	Small to medium violet-purple figs with very sweet, rich flavor and tight eye (less splitting). Excellent cold tolerance.	Mid to late summer (July–August)	Fresh eating (very sweet), preserves, drying, baking.	Self-fertile.	284036 284125	3 gal. 5 gal.
FIG 'CHICAGO HARDY'	Cold-hardy fig producing medium purple fruit with deep red flesh and balanced sweet flavor. Fruits reliably even after winter dieback.	Main crop August–Sept. (may fruit on new growth)	Fresh eating, jam-making, baking, freezing.	Self-fertile.	281011 284141	3 gal. 5 gal.
FIG 'LITTLE MISS FIGGY'	Compact dwarf variety with small dark purple figs and sweet red flesh. Ideal for smaller spaces.	Mid to late summer (August)	Fresh snacking, small-batch jam, desserts, container harvests.	Self-fertile.	284011 284180	3 gal. 5 gal. tree
FIG 'VIOLET DE BORDEAUX'	Highly regarded French variety with small, deep purple-black fruit and intensely sweet, rich flavor.	Mid to late summer (August–Sept.)	Fresh eating (dessert-quality), drying, preserves, gourmet baking.	Self-fertile.	284021	5 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
GRAPE 'CARLOS MUSCADINE' (Muscadine)	Bronze-colored muscadine grape with thick skin and sweet, musky flavor. Very vigorous and heat-tolerant.	Late season (September)	Fresh eating (slip-skin style), juice, muscadine wine, jelly.	Self-fertile. Does not require another muscadine variety for fruit set.	284156	3 gal.
GRAPE 'CATAWBA RED'	Pinkish-red American grape with sweet-tart, fruity flavor. Classic heritage variety.	Late season (Sept – Oct)	Juice, jelly, rosé and sparkling wine, fresh eating when fully ripe.	Self-pollinating.	284172	2 gal.
GRAPE 'CAYUGA WHITE' (Wine Grape)	White wine grape producing light green to golden fruit with balanced acidity and mild flavor.	Mid- to late season (September)	White wine production, blending, juice.	Self-pollinating.	284207	2 gal.
GRAPE 'EDELWEISS' (White)	Light green grape with sweet, floral flavor and tender slip-skin texture.	Early to mid-season (late August–Sept)	Fresh eating, juice, sweet white wine.	Self-pollinating.	284186	2 gal.
GRAPE 'KING OF THE NORTH' (Blue)	Cold-hardy blue grape with sweet, juicy flesh and classic “grapey” flavor.	Mid-season (September)	Fresh eating, juice, jelly, light wine.	Self-pollinating.	284131	2 gal.
GRAPE 'NESBITT' (Muscadine)	Large purple-black muscadine grape with sweet, rich flavor and thick skin.	Late season (September)	Fresh eating, juice, jelly, muscadine wine.	Self-fertile, but planting near another muscadine (like ‘Carlos’) can improve yield.	284157	3 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
HAZELNUT AMERICAN	Native shrub (<i>Corylus americana</i>) producing small to medium round nuts enclosed in fringed husks. Adaptable, cold-hardy, and well suited to Mid-Atlantic conditions. Nuts have rich, classic hazelnut flavor.	Late summer to early fall (September in the Mid-Atlantic). Nuts are ready when husks begin to dry and release.	Fresh eating (after drying), roasting, baking (cookies, cakes, biscotti), nut butters, chocolate pairings, grinding into nut meal or flour.	Requires cross-pollination from another genetically different American hazelnut for reliable nut production. Plant at least two plants within 50-100 feet of each other for best yields.	281213	7 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
KIWI 'ACTINIDIA ARGUTA ANNA'	Hardy kiwi producing smooth-skinned, grape-sized green fruit with sweet, tropical flavor. Fruit is eaten whole (no peeling required). Vigorous climbing vine.	Early to mid-fall (Sept–Oct)	Fresh eating (skin and all), fruit salads, smoothies, desserts, dehydrating.	Requires a compatible male hardy kiwi (such as Actinidia arguta Male) for fruit production. One male can pollinate up to 6-8 female vines.	284134	2 gal.
KIWI 'ACTINIDIA ARGUTA MALE'	Male pollinator vine for female hardy kiwi varieties (A. arguta). Produces flowers but no fruit. Vigorous climber.	Blooms in late spring.	Pollinator only (does not produce edible fruit).	Required to pollinate female hardy kiwi varieties such as 'Anna' and other A. arguta selections. Plant within 30-50 feet of female vines.	284133	2 gal.
KIWI 'ACTINIDIA HARDY RED'	Hardy kiwi with smooth skin and distinctive red flesh surrounding the seeds. Sweet, tropical flavor with ornamental appeal.	Early to mid-fall (September)	Fresh eating, fruit platters (striking red interior), desserts, smoothies.	Requires a compatible male hardy kiwi (A. arguta Male or similar) for fruit set.	284158	2 gal.
KIWI 'HARDY MEADER MALE'	Cold-hardy male pollinator vine selected for reliable flowering and compatibility with many female hardy kiwi varieties.	Blooms in late spring.	Pollinator only (does not produce edible fruit).	Necessary to pollinate female hardy kiwi vines. One male can pollinate multiple females planted within 30-50 feet.	284171	3 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
MULBERRY 'DWARF MOJO BERRY'	Compact, everbearing mulberry producing elongated, dark purple-black berries with sweet, classic mulberry flavor. Fruits over an extended period on a manageable shrub-sized plant.	Late spring through summer (June–August), with repeat ripening over several weeks.	Fresh eating (right off the plant), pies, cobblers, jams, smoothies, freezing.	Self-fertile. Does not require another mulberry for fruit production.	281075	3 gal.
MULBERRY RED (Morus Rubra)	Native North American mulberry producing dark red to nearly black berries with rich, sweet-tart flavor. Vigorous tree with heavy seasonal crops.	Early to mid-summer (June–July)	Fresh eating, baking (pies, cobblers), jams, syrup, wine, drying.	Often self-fertile, but fruit production improves with another mulberry nearby. Some trees may be male or female; planting more than one increases reliability.	281112	7 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
NECTARINE 'FLAVORTOP'	Large, yellow-fleshed nectarine with smooth red skin and exceptionally sweet, rich flavor. Freestone variety with firm yet juicy texture. Highly regarded for dessert quality.	Mid-season (mid to late July in the Mid-Atlantic)	Fresh eating, fruit salads, grilling, baking (tarts, crisps), smoothies, freezing.	Self-fertile. Does not require another nectarine or peach for fruit production.	281072	7 gal. Dwarf

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
ASIMINA TRILOBA (PAWPAW)	North America's largest native fruit. Pawpaws produce green, mango-shaped fruit with soft, custard-like golden flesh and a tropical flavor often described as a blend of banana, mango, and vanilla. Trees have large, lush leaves that give a tropical appearance and beautiful yellow fall color. Native and well-adapted to the Mid-Atlantic region.	Late season (Sept. to early October in the Mid-Atlantic). Fruit ripens over a 2-3 week period and should be harvested when slightly soft.	Fresh eating, smoothies, ice cream, baking, custards, and frozen pulp. Best enjoyed fresh — fruit has a short shelf life.	Requires cross-pollination from a genetically different pawpaw variety for reliable fruit set. Plant at least two different seedlings or named varieties within 10-20 feet of each other. Pollinated by flies and beetles rather than bees; hand pollination may improve yields.	281094	3 gal.

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
PEAR 'BARTLETT'	Classic European pear with smooth yellow skin and juicy, sweet flesh. Highly aromatic when ripe.	Late summer (late August to early September)	Fresh eating, canning, poaching, baking, pear preserves.	Requires cross-pollination with another European pear (Bosc, Moonglow, Seckel, or Comice).	281303	7 gal. Dwarf
PEAR 'BOSC'	Russeted brown European pear with firm, dense flesh and sweet, spicy flavor.	Early fall (September)	Fresh eating (when fully ripened), baking, poaching, roasting.	Requires cross-pollination with another European pear (Bartlett, Moonglow, or Seckel).	281240	15 gal.
PEAR 'CHOJURO' (ASIAN)	Round, bronze-skinned Asian pear with crisp texture and sweet, butterscotch-like flavor.	Late summer (late August)	Fresh eating (crisp like an apple), fruit salads, and light desserts.	Requires cross-pollination with another Asian pear (Shinko) or a compatible European pear that blooms at the same time.	281128	7 gal. Dwarf
PEAR 'COMICE'	Premium European pear with soft, buttery texture and exceptionally sweet flavor.	Early to mid-fall (September)	Fresh eating (dessert quality), cheese boards, light baking.	Requires cross-pollination with another European pear (Bartlett, Bosc, or Seckel).	281199	7 gal. Dwarf
PEAR 'KIEFFER'	Firm, yellow pear with crisp texture and mild, sweet flavor. Very hardy and productive.	Mid-fall (Sept-Oct)	Canning, baking, preserves, slicing when fully ripened.	Partially self-fertile but produces better with another European pear nearby.	281041	7 gal. Dwarf
PEAR 'MOONGLOW'	Smooth green-yellow pear with juicy, mildly sweet flavor and good disease resistance.	Late summer to early fall (early September)	Fresh eating, canning, baking.	Requires cross-pollination with another European pear (Bartlett, Bosc, or Seckel).	281042	7 gal. Dwarf
PEAR 'SECKEL'	Small, red-blushed pear known for very sweet, rich flavor. Often called the “sugar pear.”	Early fall (September)	Fresh eating, preserves, pickling, cheese boards.	Requires cross-pollination with another European pear (Bartlett, Bosc, or Moonglow).	281045	7 gal. Dwarf
PEAR 'SHINKO' (ASIAN)	Round, russeted Asian pear with crisp, juicy flesh and sweet flavor. Excellent storage life.	Late summer to early fall (September)	Fresh eating, slicing, fruit salads, light desserts.	Requires cross-pollination with another Asian pear (Chojuro) or compatible European pear blooming at the same time.	281132	7 gal. Dwarf

VARIETY	DESCRIPTION	TIMING	USES	POLLINATION REQUIREMENTS	SKU	SIZE
PEACH 'BELLE OF GEORGIA'	Large white-fleshed peach with red blush and sweet, juicy flavor. Freestone.	Late season (early to mid-August)	Fresh eating, baking, canning, freezing.	Self-fertile.	281040	7 gal. Dwarf
PEACH 'BLUSHINGSTAR'	White-fleshed peach with smooth texture and very sweet, low-acid flavor. Freestone.	Mid-season (late July)	Fresh eating, fruit salads, light desserts, freezing.	Self-fertile.	281216	7 gal. Dwarf
PEACH 'BONANZA'	Compact tree producing full-sized yellow freestone peaches with classic sweet flavor.	Mid-season (late July to early August)	Fresh eating, small-batch baking, grilling, desserts.	Self-fertile.	281169	7 gal. Dwarf
PEACH 'CANADIAN HARMONY'	Large yellow freestone peach with firm flesh and balanced sweet flavor.	Late season (mid-August)	Fresh eating, canning, baking, freezing.	Self-fertile.	281073	7 gal. Dwarf
PEACH 'CONTENDER'	Cold-hardy yellow freestone peach with juicy, sweet flavor and good disease resistance.	Mid-season (late July)	Fresh eating, baking, canning, freezing.	Self-fertile.	281218 281142	15 gal. 7 gal.
PEACH 'CURLFREE'	Yellow-fleshed freestone peach noted for strong resistance to peach leaf curl. Sweet and juicy.	Mid to late season (late July to early August)	Fresh eating, baking, preserves, freezing.	Self-fertile.	281347	15 gal.
PEACH 'HARVESTER'	Early yellow freestone peach with firm flesh and sweet flavor.	Early to mid-season (early to mid-July)	Fresh eating, early-season baking, freezing.	Self-fertile.	281143	7 gal. Dwarf
PEACH 'INDIAN BLOOD'	Heirloom peach with deep red flesh and rich, sweet-tart flavor. Unique coloration.	Late season (late August)	Fresh eating, preserves, baking, specialty desserts.	Self-fertile.	281074	7 gal. Dwarf
PEACH 'JULY ELBERTA'	Early-ripening strain of Elberta with yellow freestone flesh and classic peach flavor.	Mid-season (mid to late July)	Fresh eating, canning, baking, freezing.	Self-fertile.	281212	15 gal. Dwarf
PEACH 'LORING'	Large yellow freestone peach with firm, juicy flesh and excellent flavor.	Mid to late season (late July to early August)	Fresh eating, pies, canning, freezing.	Self-fertile.	281173	7 gal. Dwarf
PEACH 'REDHAVEN'	Reliable, widely grown yellow freestone peach with balanced sweet flavor.	Mid-season (mid to late July)	Fresh eating, canning, baking, freezing.	Self-fertile.	281282	7 gal. Dwarf
PEACH 'SUNCREST'	Large yellow freestone peach with rich, sweet flavor and attractive red blush.	Mid-season (late July)	Fresh eating, baking, desserts, freezing.	Self-fertile.	281166	15 gal. Semi-Dwarf
PEACH 'VETERAN'	Cold-hardy yellow freestone peach with sweet, juicy flesh.	Mid-season (late July to early August)	Fresh eating, baking, canning.	Self-fertile.	281357	15 gal.
PEACH 'WHITE LADY'	White-fleshed peach with exceptionally sweet, low-acid flavor and smooth texture. Freestone.	Mid-season (late July)	Fresh eating (dessert quality), fruit salads, light baking, freezing.	Self-fertile.	281127	7 gal. Dwarf

PECAN 'PAWNEE'	Early-ripening pecan variety producing large, thin-shelled nuts with high kernel quality and rich, buttery flavor. Vigorous tree with reliable production and improved disease resistance compared to older varieties.	Early to mid-fall (late September to early October in the Mid-Atlantic)	Fresh eating (after curing), roasting, pecan pie, baking (cookies, brownies), candied pecans, nut mixes.	Requires cross-pollination with a different pecan variety for consistent nut production. Pecans have separate male and female flowers on the same tree but benefit from planting a second compatible variety nearby (within 100 feet) for best yields.	281193	7 gal.

PERSIMMON 'FUYU' (Diospyros kaki)	Non-astringent Asian persimmon with round, tomato-shaped orange fruit. Crisp texture when firm and sweet, mild flavor.	Mid- to late fall (Oct-Nov)	Fresh eating (while still firm), slicing into salads, desserts, drying.	Self-fertile. Does not require another persimmon for fruit production.	281043	7 gal.
PERSIMMON 'JIRO'	Non-astringent Asian persimmon with squat, flattened fruit and sweet flavor. Similar to 'Fuyu' but slightly earlier ripening.	Mid-fall (October)	Fresh eating (firm or slightly softened), fruit salads, drying, light baking.	Self-fertile.	281085	7 gal.
PERSIMMON 'SAIJO'	Astringent Asian persimmon producing elongated orange fruit with exceptionally sweet flavor when fully soft and ripe.	Mid- to late fall (October)	Fresh eating when fully softened, persimmon pudding, breads, preserves, drying.	Self-fertile.	281035	7 gal.
PERSIMMON 'VIRGINIANA'	Native North American persimmon producing smaller orange fruit with rich, honeyed sweetness when fully ripe. Extremely cold hardy.	Late fall (Oct –Nov), often sweetest after light frost.	Fresh eating when very soft, puddings, breads, preserves, drying.	Often requires both male and female trees for fruit production. Some selected varieties are self-fruitful, but planting more than one tree increases reliability.	281046	7 gal.
